Recruit® HD
EPA Reg. No. 62719-608

Requirements for Recruit HD Installed at New Structures
(For Distribution and Use Only in the State of Florida)

ATTENTION
- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label booklet accompanying the container for Recruit HD before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Recruit HD according to this supplemental labeling is subject to all use precautions and limitations imposed by the label booklet for Recruit HD.

In Florida, Recruit HD may be installed for protection of new structures in lieu of a preconstruction termiticide treatment. Sentricon stations containing Recruit HD are inspected and serviced on at least an annual basis. When annual service is being provided, an annual inspection date must be assigned for each structure. Stations must be inspected and serviced at intervals not exceeding 30 days beyond the annual inspection date unless unfavorable conditions exist. Unfavorable conditions include frozen or water-saturated soil or normal seasonal decline in subterranean termite foraging activity that may temporarily disrupt feeding on Recruit HD. Do not allow more than fifteen months to elapse between inspections. Seasonal effects on termite activity vary geographically, but feeding activity typically declines during periods when the local historical average daily temperature falls below 50°F. Inspection and servicing may be suspended during these periods; however, do not allow more than fifteen months to elapse between inspections. Refer to National Weather Service data or contact Dow AgroSciences for information regarding local historical average daily temperature.
